### Chapter Two - MQL-to-SQL Use Case: MQLRead

#### **Use Case Brief**

Use Case Name: MQLRead

#### Actors:

- Requestor
- Responder

#### Use Case Description:

After the Requestor has submitted a Read Query Request to the Responder, the Responder provides a Read Query Response<sup>1</sup>.

```
{
  "type": "/sakila/customer",
  "customer_id": 1,
  "first_name": null,
  "last_name": null
}
```

#### **Read Query Request**

```
"code": "/api/status/ok",
  "result": [
      "type": "/sakila/customer",
      "customer_id": 1,
     "first_name": "MARY",
"last_name": "SMITH"
   }
  ],
  "sql": [
      "statement": "SELECT T1.first name AS T1C1\n, T1.last name AS T1C2\nFROM sakila.customer
T1\nWHERE T1.customer id = :P1",
      "params": [
          "name": "P1",
          "value": 1,
          "type": 1
      ]
    }
  "timing": [
      "name": "begin query #0",
      "microtime": "0.97851400 1345456623"
      "name": "end query #0",
      "microtime": "0.99005200 1345456623"
```

<sup>&</sup>lt;sup>1</sup> Using the MQL to SQL Query Editor.

```
],
"status": "200 OK",
"transaction_id": "not implemented"
```

Read Query Response

### Chapter Three - MQL-to-SQL Use Case: MQLWrite

#### **Use Case Brief**

Use Case Name: MQLWrite

#### Actors:

- Requestor
- Responder

#### Use Case Description:

After the Requestor has submitted a Write Query Request to the Responder, the Responder provides a Write Query Response<sup>2</sup>.

```
{
  "type": "/sakila/customer",
  "customer_id": 1,
  "first_name": "MARY",
  "last_name": "SMITH"
}
```

#### Write Query Request

```
"code": "/api/status/ok",
 "result": [
     "type": "/sakila/customer",
     "customer_id": 1,
     "first_name": "MARY",
"last_name": "SMITH"
   }
 ],
  "sql": [
      "statement": "UPDATE sakila.customer T1\nSET T1.first_name = :P2\n, T1.last_name
= :P3\nWHERE T1.customer id = :P1",
      "params": [
          "name": "P1",
          "value": 1,
          "type": 1,
          "name": "P2",
          "value": "MARY",
          "type": 2,
          "name": "P3",
          "value": "SMITH",
          "type": 2
     ]
   }
  "timing": [
      "name": "begin query #0",
```

<sup>&</sup>lt;sup>2</sup> Using the MQL to SQL Query Editor.

```
"microtime": "0.97851400 1345456623"

},

{
    "name": "end query #0",
    "microtime": "0.99005200 1345456623"

}

],
    "status": "200 OK",
    "transaction_id": "not implemented"
}
```

Write Query Response
